BACKGROUND OF PROJECT (To be completed by Evaluating Department/Division. Explain need for project/equipment):

Digester #2 is one of thirteen anaerobic digesters at the Regional Wastewater Reclamation Facility. The digesters are used in treatment of the solids generated at the RWRP to eliminate pathogens and volatile organic compounds. Upon inspection of digester #2, it was discovered that gasses were escaping through cracks in the roof of the digester. Leaking methane to the atmosphere is against the San Joaquin Valley Air Pollution Control Districts (SJVAPCD) rules. Also methane is highly flammable, and leaking methane is a potential fire/explosion hazard. The work of this project includes the removal and replacement of the failing interior coatings. The project also includes application of a ferric corrosion eliminator and a new roof coating.
