The Engineer's Estimate/Budget Allocation for this expenditure is \$ 900,000.

BACKGROUND OF PROJECT: The Variable Frequency Drives (VFDs) are used at the Fresno-Clovis Regional Wastewater Facility to control raw sewage pump motors to accommodate the varying wastewater flows into the facility. The current VFD's were retrofitted in 2013 and have been reliable until 2019 at which time the site has experienced failures at rate of 2 per year. This project will replace the VFDs with a 6-pulse technology that will be much more robust, reliable, and will be supported for years to come.
