The Engineer's Estimate for this expenditure is \$1,159,000.00. The contract price is 4.62% above the Engineer's Estimate. If the overage is greater than 10% or only one bid was received, give explanation: N/A

BACKGROUND OF PROJECT (To be completed by Evaluating Department/Division. Explain need for project/equipment):

After a detailed analysis of the wastewater collection system, the Wastewater Collection Sewer Master Plan identified sewer pipes and appurtenances in need of rehabilitation and replacement. The scope of work for the Project will correct sewer system structural deficiencies in the vicinity of North Fresno Street and East Shields Avenue.

The 2015 Wastewater Collection System Master Plan incorporated inspections of the City's sewer system. The goal of these inspections was to evaluate the structural and capacity handling capability of all the downtown sewer pipes. Through this investigation, portions of these sewer pipes were found to have structural deficiencies such as cracks and voids, some are past the design useful life and other pipes are undersized per the current City Standard design requirements.

The ages of the pipes in the Project area range from 1950 to 1980. The typical design life of a sewer pipe is 50 to 75 years. The advanced age and structural deficiencies discovered in these areas require that portions of the sewer pipes be rehabilitated. Additionally, localized point repairs will take place in areas of severe damage at various locations along these sewer mains.
