3. Two independent sources of water, meeting Federal and State Drinking Water Act Standards, are required to serve the tract including any subsequent phases thereof. The two-source requirement may be accomplished through any combination of water main extensions, construction of supply wells, or other acceptable sources of water supply approved by the Assistant Public Utilities Director.
4. Engineered improvement plans prepared by a Registered Civil Engineer are required for proposed additions to the City Water System.
5. All Public water facilities shall be constructed in accordance with The Department of Public Works standards, specifications, and policies.

Conditions of Approval for Water Supply

The City's groundwater aquifer has been documented by the State Department of Water Resources (Bulletin 118) to be critically over-drafted, and has been designated a high-priority basin for corrective action through the Sustainable Groundwater Management Act (SGMA). The City has worked with existing ratepayers to develop a compliance plan for the SGMA, and the City will work with the project proponent to develop an SGMA compliance plan for the proposed project. The SGMA compliance requirements for the proposed project will be applied as conditions of approval for water supply.

As conditions of approval for water supply, and to comply with the requirements of the SGMA, a water supply plan must be approved by the Director of the Department of Public Utilities prior to Occupancy Permits being granted. The project proponent shall be required to prepare a water supply plan for the project that, at a minimum, includes the following:

1. The City's water consumption records indicate that the peak hour water use for the existing single-family residential unit was approximately 2.55 gallons per minute during calendar year 2013.
2. The total annual water demand in 2013 for the existing single-family residential unit was 517,115 gallons, or 1.6 acre feet.
3. The applicant proposes to construct 13 single-family residential units, and each unit is estimated to have a peak hour demand of 2.12 gallons per minute.
4. The total peak hour demand for the proposed project is 27.6 gallons per minute, and the total annual water demand is estimated to be 5.6 million gallons, or 17.3 acre

feet. This represents an increase in total water demand for this parcel of 15.7 acre feet per year.

5. The applicant shall submit a proposal to the City to:
 - a. Provide a primary water supply source to serve the increased water demands for these 13 single-family residential units.
 - b. Provide a secondary water supply source to serve the increased water demands for these 13 single-family units in the event the primary water supply source is unavailable.
 - c. Provide groundwater recharge capacity within the City's municipal corporate limits to accommodate 110 percent of the total annual demand (17.3 acre feet) required for these 13 single-family residential units.
6. The applicant shall not be reimbursed for water supply facilities provided to serve the water demands for the applicant's 13 single-family residential units.
7. If requested, the applicant may request a cost estimate from the City to provide a primary water supply for peak hour demands, redundant water supply for peak hour demands, and groundwater recharge capacity.

Water Fees

The following Water Connection Charges and fees shall be paid for the project.

1. Water service(s) and/or meter(s) installation(s)

The Department of Public Utilities, Solid Waste Division has completed a review of Vesting Tentative Map of Tract No. 6160 and conditional Use Permit Application No. C-16-062 APN: 417-140-21 filed by Jeffrey T. Roberts and Claudia Cazares of Granville Homes, on behalf of AFREI, LLC and pertains to ± 1.13 (net) acres of property located on the northeast corner of West San Jose and North Colonial Avenues. Vesting Tentative Map of Tract 6160 proposes a 13-lot residential planned unit development with one outlot. Conditional Use Permit Application No. C-16-062 proposes the construction of 12 attached two-story single family residential dwellings and one detached single family dwelling and private open space area with a future potential gated entrance of the shared driveway. The following requirements and conditions are to be placed on this project as a condition of approval by the Department of Public Utilities.

General Findings:

This location is serviced by a Commercial Solid Waste Franchisee. For service information, please contact Allied Waste at 559-275-1551 or 1-800-493-4285.

General Requirements:

- This location will require a one, 2-cell trash enclosure to be serviced weekly. The trash enclosure is to conform to P-33, P-34 & P-95 standards which are designed to accommodate separate facilities containing 2 - 4cu. yd. bins, one for trash and one for recycling collection.
- P-33 5.f; If the distance from the curb of the trash enclosure to the driveway is more than 45'; developer will need to provide a 44' (centerline) turning radius or T-turnaround (hammerhead) area where the solid waste vehicle is to turn around.
- Will require details of radius at corners that hold proposed trash enclosures as well as radius at gate entrance/exit to ensure 44' centerline radius. If Fire is able to enter this location the so can Solid Waste, thus, if Fire signs off then so will Solid Waste on this requirement.
- If a gate is to be installed; Following P-33 5.h
 - The 'gate must be 40' away from entrances/exits to prevent trucks from sticking out into the roadway while waiting to access enclosure..."
 - A gate code must be provided to allow access to service site or gate shall be left open from 5:30am to 6:00pm on service days.
 -

Future Needs/Requirements:

Revise plans to address concerns stated above and resubmit for approval.

Make sure developer/contractor receives copy of current City of Fresno Standards P-33, P-34 & P-95

SUBJECT: VESTING TENTATIVE TRACT MAP NO. 6160/C-16-062
STAFF ONLY SRC 12-22-16, DEVELOPER SRC 1-12-17

1. VTT 6160 is proposed for 13 lot single family home private street gated community.
2. The entire tract is in the primary service area of permanent Fire Station 20 at 4537 N. Whison Ave.
3. Existing public hydrant locations are adequate to protect this development without the installation of a private fire hydrant. The minimum required fire flow for this project is 1500 gpm. Public Utilities will need to confirm if there is adequate water well production capacity to achieve this fire flow at peak domestic water demand for the area.
4. This project needs to be addressed to N. Colonial Ave as there is no drive access from W. San Jose.
5. Provide Click-to-Enter for the electric gate in addition to Fire X-1 bypass hardware..
6. Designate curbs indicated on the attached sheet with red paint and "FIRE LANE NO PARKING" in 3" white letters every 50'. Provide California Vehicle Code (CVC) Section 22658 mandated no parking warning sign at the entrance authorizing towing of vehicles parked in fire lanes.
7. As confirmed by the applicant at DRC, each parcel will have a separate 1" water service to provide domestic water and a supply for an NFPA 13D residential fire sprinkler system.

Total Drainage Fee: \$2,425.00		Total Service Charge: \$220.00		

* The Development Review Service Charge shown above is associated with FR TRACT 6160 and is currently proposed to develop in conjunction with this permit. Payment for this entitlement shall satisfy the amount due on the associated permits.

The proposed development will generate storm runoff which produces potentially significant environmental impacts and which must be properly discharged and mitigated pursuant to the California Environmental Quality Act and the National Environmental Policy Act. The District in cooperation with the City and County has developed and adopted the Storm Drainage and Flood Control Master Plan. Compliance with and implementation of this Master Plan by this development project will satisfy the drainage related CEQA/NEPA impact of the project mitigation requirements.

Pursuant to the District's Development Review Fee Policy, the subject project shall pay review fees for issuance of this Notice of Requirements (NOR) and any plan submittals requiring the District's reviews. The NOR fee shall be paid to the District by Developer before the Notice of Requirement will be submitted to the City. The Grading Plan fee shall be paid upon first submittal. The Storm Drain Plan fee shall be paid prior to return/pick up of first submittal.

The proposed development shall pay drainage fees pursuant to the Drainage Fee Ordinance prior to issuance of a building permit at the rates in effect at the time of such issuance. The fee indicated above is valid through 2/28/17 based on the site plan submitted to the District on 12/07/16 Contact FMFCD for a revised fee in cases where changes are made in the proposed site plan which materially alter the proposed impervious area.

Considerations which may affect the fee obligation(s) or the timing or form of fee payment:

- a.) Fees related to undeveloped or phased portions of the project may be deferrable.
- b.) Fees may be calculated based on the actual percentage of runoff if different than that typical for the zone district under which the development is being undertaken and if permanent provisions are made to assure that the site remains in that configuration.
- c.) Master Plan storm drainage facilities may be constructed, or required to be constructed in lieu of paying fees.
- d.) The actual cost incurred in constructing Master Plan drainage system facilities is credited against the drainage fee obligation.
- e.) When the actual costs incurred in constructing Master Plan facilities exceeds the drainage fee obligation, reimbursement will be made for the excess costs from future fees collected by the District from other development.
- f.) Any request for a drainage fee refund requires the entitlement cancellation and a written request addressed to the General Manager of the District within 60 days from payment of the fee. A non refundable \$300 Administration fee or 5% of the refund whichever is less will be retained without fee credit.

7. The Federal Clean Water Act and the State General Permits for Storm Water Discharges Associated with Construction and Industrial Activities (State General Permits) require developers of construction projects disturbing one or more acres, and discharges associated with industrial activity not otherwise exempt from National Pollutant Discharge Elimination System (NPDES) permitting, to implement controls to reduce pollutants, prohibit the discharge of waters other than storm water to the municipal storm drain system, and meet water quality standards. These requirements apply both to pollutants generated during construction, and to those which may be generated by operations at the development after construction.
- a. State General Permit for Storm Water Discharges Associated with Construction Activities, effective July 1, 2010, as amended. A State General Construction Permit is required for all clearing, grading, and disturbances to the ground that result in soil disturbance of at least one acre (or less than one acre) if part of a larger common plan of development or sale). Permittees are required to: submit a Notice of Intent and Permit Registration Documents to be covered and must pay a permit fee to the State Water Resources Control Board (State Board), develop and implement a storm water pollution prevention plan, eliminate non-storm water discharges, conduct routine site inspections, train employees in permit compliance, and complete an annual certification of compliance.
 - b. State General Permit for Storm Water Discharges Associated with Industrial Activities, April, 2014 (available at the District Office). A State General Industrial Permit is required for specific types of industries described in the NPDES regulations or by Standard Industrial Classification (SIC) code. The following categories of industries are generally required to secure an industrial permit: manufacturing; trucking; recycling; and waste and hazardous waste management. Specific exemptions exist for manufacturing activities which occur entirely indoors. Permittees are required to: submit a Notice of Intent to be covered and must pay a permit fee to the State Water Resources Control Board, develop and implement a storm water pollution prevention plan, eliminate non-storm water discharges, conduct routine site inspections, train employees in permit compliance, sample storm water runoff and test it for pollutant indicators, and annually submit a report to the State Board.
 - c. The proposed development is encouraged to select and implement storm water quality controls recommended in the Fresno-Clovis Storm Water Quality Management Construction and Post-Construction Guidelines (available at the District Office) to meet the requirements of the State General Permits, eliminate the potential for non-storm water to enter the municipal storm drain system, and where possible minimize contact with materials which may contaminate storm water runoff.
8. A requirement of the District may be appealed by filing a written notice of appeal with the Secretary of the District within ten days of the date of this Notice of Requirements.
9. The District reserves the right to modify, reduce or add to these requirements, or revise fees, as necessary to accommodate changes made in the proposed development by the developer or requirements made by other agencies.

EXHIBIT NO. 2

The minimum finish floor elevation shall be 321.38 (U.S.G.S. Datum).

The District's existing Master Plan drainage system is designed to serve medium-low density residential uses and the existing Master Plan storm drainage facilities do not have capacity to serve the proposed high-density residential land use. The developer shall be required to mitigate the impacts of the increased runoff from the proposed medium-high density type residential land use to a rate that would be expected if developed to medium-low density residential. The developer may either make improvements to the existing pipeline system to provide additional capacity or may use some type of permanent peak reducing facility in order to eliminate adverse impacts on the existing system. Should the developer choose to construct a permanent peak-reducing facility, such a system would be required to reduce runoff from a ten-year storm produced by a medium-high density residential development, to a two-year discharge, which would be produced by the property if developed medium-low density residential. Implementation of the mitigation measures may be deferred until the time of development.

In an effort to improve storm runoff quality, outdoor storage areas shall be constructed and maintained such that material that may generate contaminants will be prevented from contact with rainfall and runoff and thereby prevent the conveyance of contaminants in runoff into the storm drain system.

NOTICE OF REQUIREMENTS**

**FR
TRACT No. 6160**

7. The Federal Clean Water Act and the State General Permits for Storm Water Discharges Associated with Construction and Industrial Activities (State General Permits) require developers of construction projects disturbing one or more acres, and discharges associated with industrial activity not otherwise exempt from National Pollutant Discharge Elimination System (NPDES) permitting, to implement controls to reduce pollutants, prohibit the discharge of waters other than storm water to the municipal storm drain system, and meet water quality standards. These requirements apply both to pollutants generated during construction, and to those which may be generated by operations at the development after construction.
- a. State General Permit for Storm Water Discharges Associated with Construction Activities, effective July 1, 2010, as amended. A State General Construction Permit is required for all clearing, grading, and disturbances to the ground that result in soil disturbance of at least one acre (or less than one acre) if part of a larger common plan of development or sale). Permittees are required to: submit a Notice of Intent and Permit Registration Documents to be covered and must pay a permit fee to the State Water Resources Control Board (State Board), develop and implement a storm water pollution prevention plan, eliminate non-storm water discharges, conduct routine site inspections, train employees in permit compliance, and complete an annual certification of compliance.
 - b. State General Permit for Storm Water Discharges Associated with Industrial Activities, April, 2014 (available at the District Office). A State General Industrial Permit is required for specific types of industries described in the NPDES regulations or by Standard Industrial Classification (SIC) code. The following categories of industries are generally required to secure an industrial permit: manufacturing; trucking; recycling; and waste and hazardous waste management. Specific exemptions exist for manufacturing activities which occur entirely indoors. Permittees are required to: submit a Notice of Intent to be covered and must pay a permit fee to the State Water Resources Control Board, develop and implement a storm water pollution prevention plan, eliminate non-storm water discharges, conduct routine site inspections, train employees in permit compliance, sample storm water runoff and test it for pollutant indicators, and annually submit a report to the State Board.
 - c. The proposed development is encouraged to select and implement storm water quality controls recommended in the Fresno-Clovis Storm Water Quality Management Construction and Post-Construction Guidelines (available at the District Office) to meet the requirements of the State General Permits, eliminate the potential for non-storm water to enter the municipal storm drain system, and where possible minimize contact with materials which may contaminate storm water runoff.
8. A requirement of the District may be appealed by filing a written notice of appeal with the Secretary of the District within ten days of the date of this Notice of Requirements.
9. The District reserves the right to modify, reduce or add to these requirements, or revise fees, as necessary to accommodate changes made in the proposed development by the developer or requirements made by other agencies.

OTHER REQUIREMENTS
EXHIBIT NO. 2

The minimum finish floor elevation shall be 321.38 (U.S.G.S. Datum).

The District's existing Master Plan drainage system is designed to serve medium-low density residential uses and the existing Master Plan storm drainage facilities do not have capacity to serve the proposed high-density residential land use. The developer shall be required to mitigate the impacts of the increased runoff from the proposed medium-high density type residential land use to a rate that would be expected if developed to medium-low density residential. The developer may either make improvements to the existing pipeline system to provide additional capacity or may use some type of permanent peak reducing facility in order to eliminate adverse impacts on the existing system. Should the developer choose to construct a permanent peak-reducing facility, such a system would be required to reduce runoff from a ten-year storm produced by a medium-high density residential development, to a two-year discharge, which would be produced by the property if developed medium-low density residential. Implementation of the mitigation measures may be deferred until the time of development.

In an effort to improve storm runoff quality, outdoor storage areas shall be constructed and maintained such that material that may generate contaminants will be prevented from contact with rainfall and runoff and thereby prevent the conveyance of contaminants in runoff into the storm drain system.

VESTING TENTATIVE MAP OF TRACT NO. 6160

APN: 417-140-21**

Dear Ms. Aguilar,

In response to your request for review and comment on the above Rezone Application and Conditional Use Permit Application, as well as the Vesting Tentative Map of Tract No. 6160 for the proposed 13-lot residential planned unit development to consist of 12 attached two-story single family residential dwellings and one detached single family dwelling to be located at 614 West San Jose Avenue, Fresno Unified School District submits the following.

Any urban commercial or residential development occurring as a result of project approval will have an impact on the District's student housing capacity. The District, through local funding, is in a position to partially mitigate its shortage of classrooms to accommodate planned population growth for the foreseeable future. However, the District recognizes that the legislature, as a matter of law, has deemed, under Government Code Section 65996, that all school facilities impacts are mitigated as a consequence of SB 50's Level 1, 2 and 3 developer fee legislative provisions.

The District levies a residential development fee and the current rate is \$3.48 per square foot. Fees will be calculated pursuant to rates effective at the time of payment and new development on the property will be subject to the development fee prior to issuance of a building permit.

The project is presently within the attendance areas of the schools identified below.

Elementary School:	Kratt
Middle School:	Tenaya
High School:	Bullard

Thank you for the opportunity to comment. Please contact our office at 457-3066 if you have any questions or require additional information regarding our comments.

Recommended Conditions of Approval:

- Construction permits for development should be subject to assurance of sewer capacity of the Regional Wastewater Treatment Facility. Concurrence should be obtained from the California Regional Water Quality Control Board (RWQCB). For more information, contact staff at (559) 445-5116.
- Construction permits for the development should be subject to assurance that the City of Fresno community water system has the capacity and quality to serve this project. Concurrence should be obtained from the State Water Resources Control Board, Division of Drinking Water-Southern Branch. For more information call (559) 447-3300.
- Due to the proximity of the proposed residential uses to the existing Fig Garden shopping & event center, consideration should be given to conformance with the Noise Element of the City of Fresno General Plan. A noise study should be conducted in order to identify the potential noise impacts and offer mitigation alternatives.
- The proposed construction project has the potential to expose nearby residents to elevated noise levels. Consideration should be given to your City's municipal code.

- As a measure to protect ground water, all water wells and/or septic systems that exist or have been abandoned within the project area should be properly destroyed by an appropriately licensed contractor.

Prior to destruction of agricultural wells, a sample of the upper most fluid in the water well column should be sampled for lubricating oil. The presence of oil staining around the water well may indicate the use of lubricating oil to maintain the well pump. Should lubricating oil be found in the well, the oil should be removed from the well prior to placement of fill material for destruction. The "oily water" removed from the well must be handled in accordance with federal, state and local government requirements.

- Should any underground storage tank(s) be found during the project, the applicant shall apply for and secure an Underground Storage Tank Removal Permit from the Fresno County Department of Public Health, Environmental Health Division. Contact the Certified Unified Program Agency at (559) 600-3271 for more information.

RE: Vesting Tentative Map of Tract No. 6160, Conditional Use Permit No. C-16-062
S/E Barstow and Palm avenues

Dear Ms. Aguilar:

The Fresno Irrigation District (FID) has reviewed the Vesting Tentative Map of Tract No. 6160, Conditional Use Permit C-16-062 for which the applicant proposes a 13 lot residential planned unit development with one outlot. The planned development proposes reduced lot sizes ranging from 1,700 square feet to 4,200 square feet in size, and a 17,400 square foot outlot, APNs: 417-140-21. FID has the following comments:

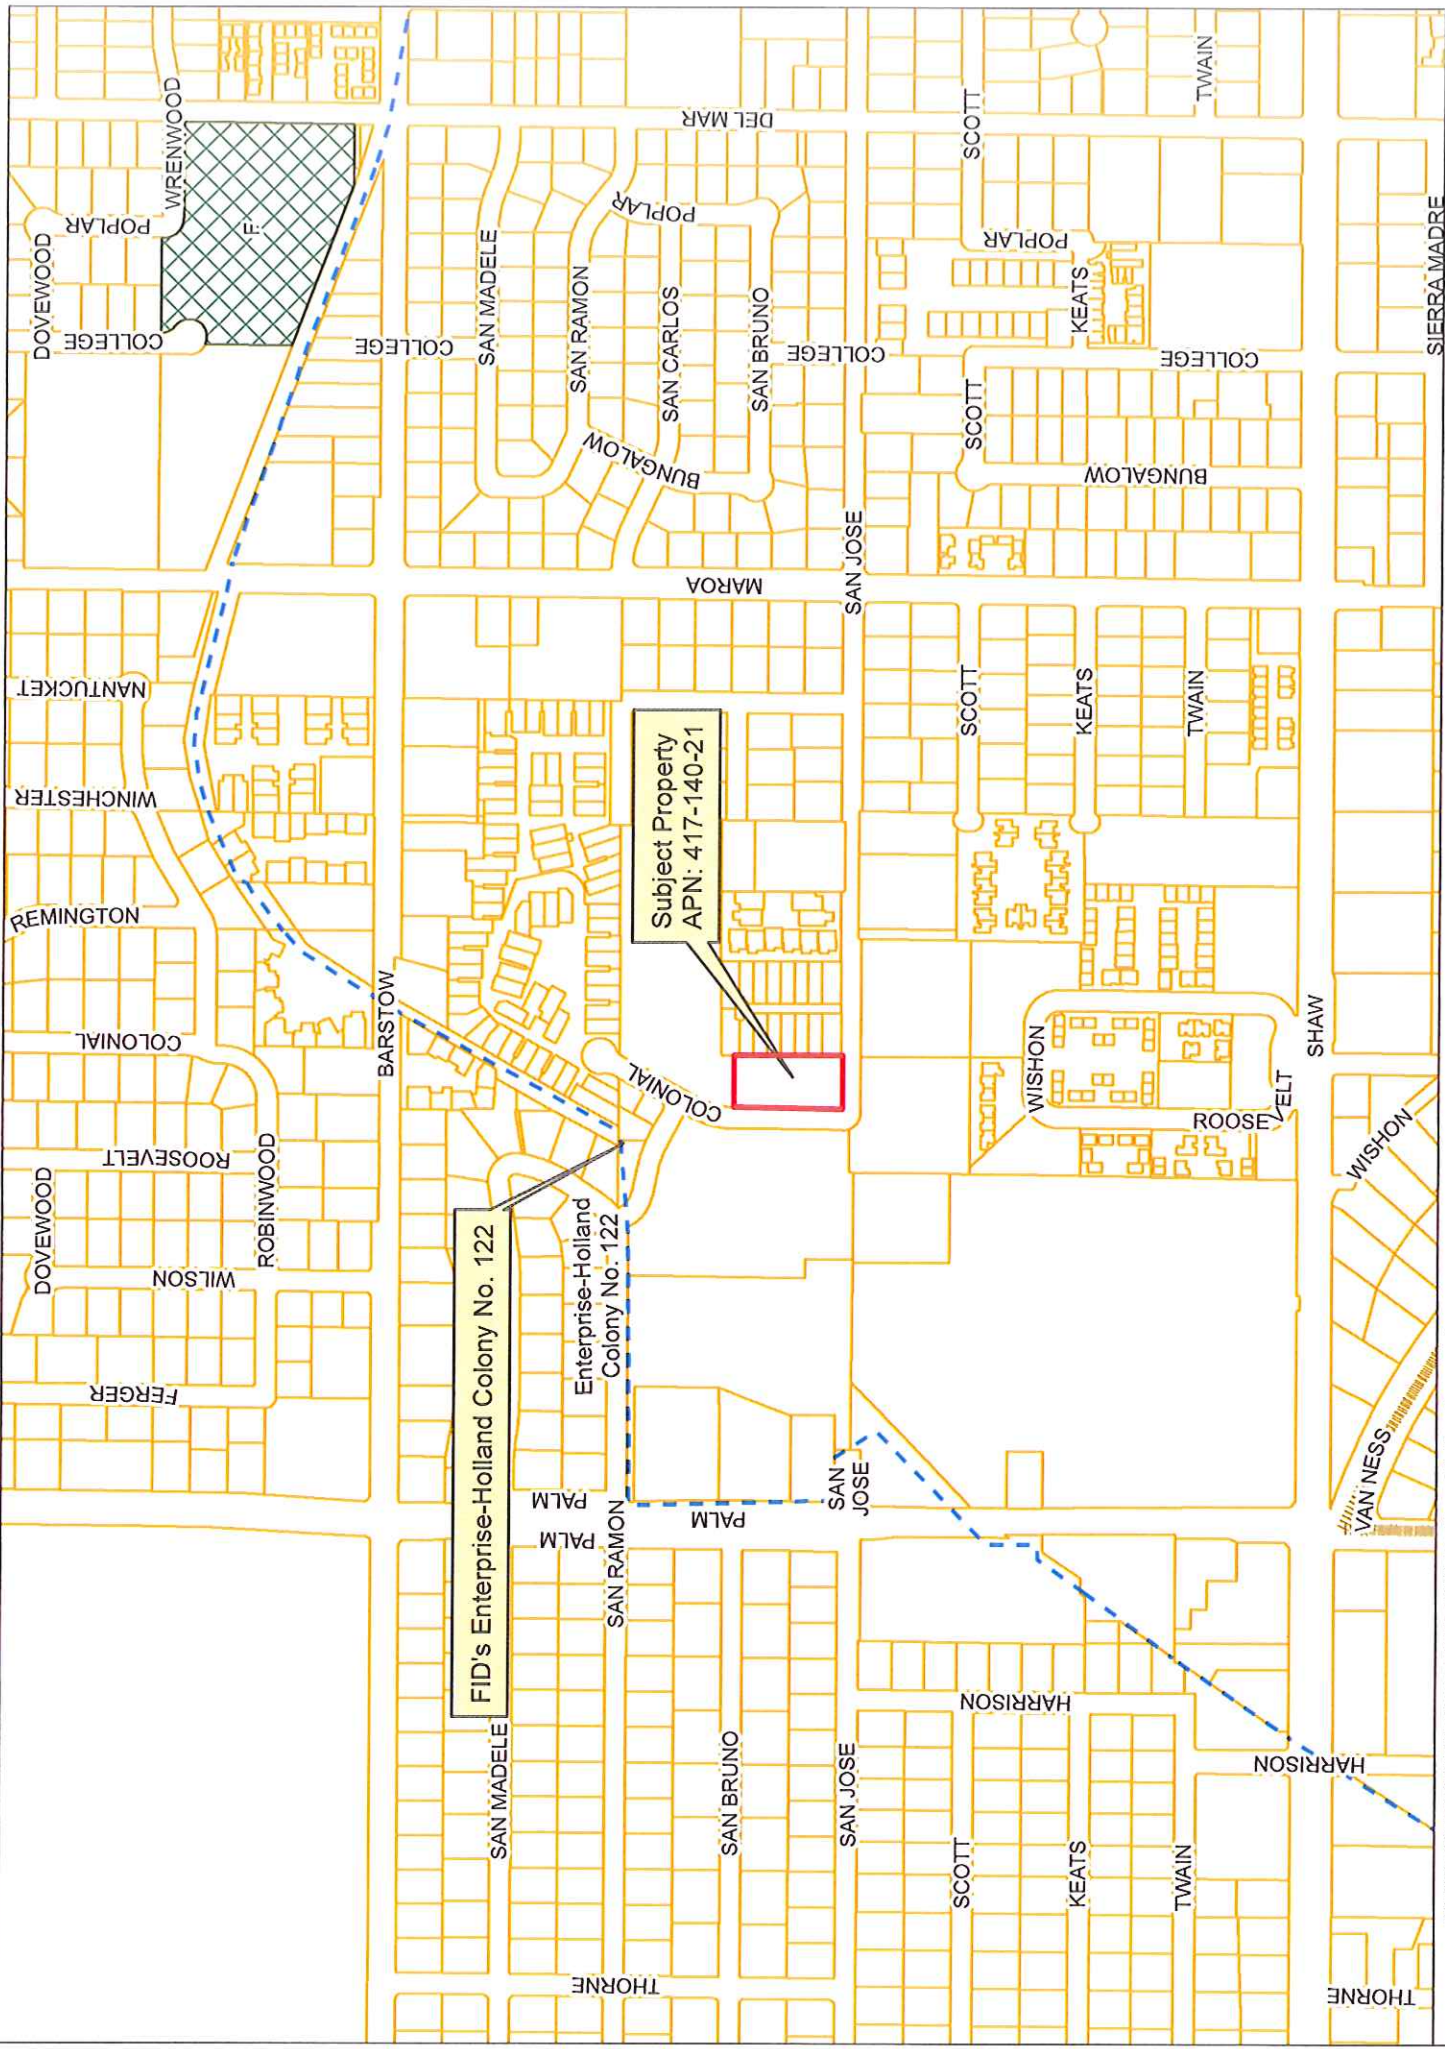

1. FID does not own, operate, or maintain any facilities located on the subject property as shown on the attached FID exhibit map.
2. For informational purposes, FID's active Enterprise-Holland Colony No. 122 Pipeline runs southwesterly and crosses San Ramon Avenue approximately 300 feet north of the subject property, as shown on the attached FID exhibit map. Should this project include any street and or utility improvements along San Ramon Avenue, or in the vicinity of the pipeline, FID requires it review and approve all plans.

Thank you for submitting the proposed project for our review. We appreciate the opportunity to review and comment on the subject documents for this project. If you have any questions please feel free to contact Jeremy Landrith at (559) 233-7161 extension 7407 or JLandrith@fresnoirrigation.com.

Sincerely,

Laurence Kimura, P.E.
Chief Engineer
